These Disposable Monopolar Scissors offer precise and smooth cutting – all the way to the tips. Distal tip sharpness provides exceptional performance for partial opening of cystic duct in preparation for cholangiogram.

Comfortable Design

With effective one hand/finger operation and scissor blade orientation control, the ergonomically enhanced handle delivers a comfortable tactile feel and control for all hand sizes. The rotation knob allows easy 360° rotation of the shaft.

Reliable Operation

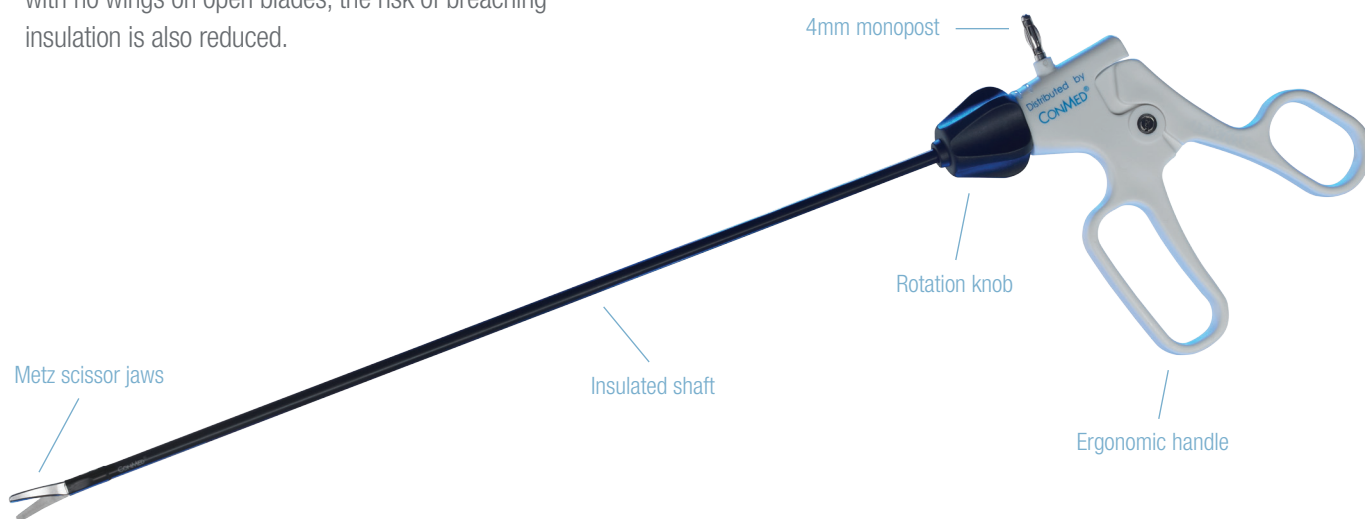

Extended shaft insulation to the blade minimizes the chance of thermal damage through stray burns from the shaft. And with no wings on open blades, the risk of breaching insulation is also reduced.

Precise and sharp blades provide smooth cutting especially at blade tips

Universal 4mm monopost fits most cords

Extended PTFE insulation to the blade reduces chance of thermal damage

Internal hinge design for open blades reduces risk of breaching insulation
