Passion for precision

Imagine the world's finest scissors – why not try them for your plastic surgery procedures?

With Stille original scissors you can feel assured that your patients get the best possible care. Stille scissors are extremely light and well balanced. The tissue dissection and separation enabled by Stille's scissors is outstanding, not only when new, but also throughout their long life.

Stille SuperCut scissors have an unrivalled cutting performance. They cut with extreme precision right down to the points of the blades with a minimum of effort for the surgeon – simply the right choice when asking for superior cutting performance.

The special grind makes them suitable for both right- and left handed surgeons

Stille Ergonomic Scissors

Stille's ergonomic designed scissors provide the opportunity to perform time consuming procedures with less fatigue and strain on the hand. The design with slightly angled shanks allow for a more favorable grip with the hand close to its basic resting position. All models of the ergonomic scissors are available with the original Stille Super cut.

Stille Essential Scissors set for plastic surgery

This is a suggested minor kit of Stille scissors to use for your plastic surgery procedures. They will be your best working tools for many years of precise surgery.

Stille quality has no age.

A few years ago, a Swedish hospital sent a pair of scissors to Stille for sharpening. Upon examination it turned out that the scissors were produced by Stille in the early 1930's. The scissors were sharpened and returned to the hospital where they are now again in daily use.

Handled correctly, a Stille instrument never grows old.

Stille instrument sets – a passion for precision!

Stille has, often in close collaboration with leading surgeons, developed a number of so called instrument sets with the aim of simplifying for surgeons and other perioperative staff members.

Stille's instrument sets build on our passion for precision and share the same philosophy of focusing on the instruments that make a difference in achieving the best possible outcome. Thereby, we are able to limit the number of instruments in each set to a bare minimum. In essence, we want our instrument sets to reflect the character of our individual instruments – precise, minimalistic and highly effective.

Our instruments sets are available in three different configurations:

- **Stille Classics** are collections of a very limited number of instruments. The Classics sets are primarily intended as a sampler for surgeons who wish to familiarize themselves with the precision and quality of Stille instruments. More often than not, the Classic sets can be used for different surgical procedures.
- **Stille Essentials** are a series of instrument sets combined with a specific procedure in mind. Again, with the aim of being minimalistic in scope and complexity, these sets contain only the essential instruments commonly used for the specific procedure.
- **Stille Ultimates** expand on the Stille Essentials. Just as the latter, the Ultimate sets combine instruments for a specific surgical procedure, but include a broader collection of instruments and tools commonly used to achieve the best outcome. The Ultimates are perfect for the surgeon who recognizes the value of having the best possible tools to achieve the best possible outcome for the patient.

Stille AB was founded in 1841 as an instrument workshop for the renowned Karolinska Institute in Stockholm, Sweden. Today, 170 years later, we pride ourselves in providing surgical instruments of the highest quality by staying true to our legacy of craftsmanship and close collaboration with the surgical community.
